Every day we cover extra miles to accelerate the development cycle, supporting more than 50 vaccine developers around the world. While we usher in the new year 2021 with optimism and positive energy, we would like to present to you the 'Merck Life Sciences Price List 2021'.

Artificial intelligence (AI) is set to transform chemical synthesis, providing opportunities to shorten one of the longest steps in the drug discovery process – getting new medicines to patients faster. SYNTHIA™, powerful AI Retrosynthesis software provides complete solutions for making the required molecule with desired properties. The landmark year for genome editing would be incomplete without congratulating Emmanuelle Charpentier and Jennifer A. Doudna - Nobel Prize winners of 2020. With 22 CRISPR-related patents worldwide, Merck collaborated with Mammoth Biosciences for CRISPR-based SARS CoV-2 test.

In 2020, our Merck High-End Skill Development Centre, CSIR-IMTech initiative and Merck Innovation Lab, Bangalore went online and through several learning program we coached 9000+ researchers from 700+ universities. Merck augmented Government of India's initiative for building skills in the area of Life Science. Our partnership with FSSAI for CMAT lab is another milestone in skill development for food testing to address quality requirements.

Merck Young Scientist Award, a step towards our vision of empowering the scientific community awarded 11 curious minds in 2019. In 2021, we will be launching the next phase of this award and work to solve the toughest problems in Life Science by collaborating with the global scientific community.

Leverage DNA - Encoded library technology for drug discovery

DNA - Encoded library (DEL) technology is a drug discovery tool containing small DNA-barcoded compounds (Satz 2018). The DyNAbind fragment DEL contains small molecular weight compounds. The high ligand efficiency of fragment molecules is harnessed to effectively probe a target's binding site and increase the likelihood of discovering binders

Targeted protein degradation

An emerging strategy in drug discovery to access difficult-to-treat diseases is targeted protein degradation. While traditional small-molecule or antibody drugs may only allow access to ~20% of the proteome, degradation techniques may open the door to the other 80%.¹ The molecules used in these approaches are often called **Proteolysis Targeting Chimeras (PROTACs)**, bifunctional molecules that eliminate target proteins from cells

1 PROTAC design
Constructed to bind both protein of interest (POI) and E3 ligase through a crosslinker

2 Ternary complex
PROTAC recruits POI to E3 ligase

3 Polyubiquitination
Ubiquitin (Ub) added to POI Lys residues

4 Target degradation
Ub-marked POI is degraded by the proteasome

Elemental Impurity Mixes as Certified Reference Material Standards for USP<232> and Ph. Eur.9th Edition

Contamination of drug products with elemental impurities poses a risk to patient health. It is therefore critical to control, within acceptable limits, the levels of these impurities introduced into drug products through each step of the manufacturing process. Effective January 1, 2018, the United States Pharmacopeia (USP), as well as the European Pharmacopeia (Ph. Eur) will adopt the ICH Q3D guidelines on specification limits for elemental impurities. These guidelines are documented in General Chapters <232> (Limits) and <233> (Procedures) in USP 40 NF35 (Second Supplement) and in the general chapter 5.20 of Ph. Eur. Supplement 9.3. Elemental Impurity Mixes help to streamline your laboratory's ICP-OES/ICP-MS impurity analysis with accurate and consistent Certified Reference Materials for both calibration and quality control.

- All mixes produced and analyzed under the scope of ISO/IEC 17025, ISO Guide 34 and ISO/IEC 17034 accreditation
- Convenient concentrations according to the oral and parenteral PDEs given in USP <232> and Ph.Eur. 9.3, general chapter 5.20
- Inorganic mercury included in mix—no need for a separate solution
- COA included in each package
- COA with extended certification report

Titration goes digital

Connect Directly to Your Titrator with Smart Chemicals

A new titration technology, using Supelco® SmartTitrants & Supelco® SmartStandards transfers data seamlessly to the titrator. Just a brief touch on the reagent bottles saves time, reduces errors and always ensures maximum data integrity

Safe data transfer via RFID technology

By copying data from certificates of analysis is slow and creates chances for errors.

Smart Chemicals eliminate time consuming steps and human errors by transferring all data wirelessly and instantly to the titrator software. Volumetric solutions, Karl Fischer titrants and all standards are embedded with an RFID (Radio Frequency Identification) tag. All relevant data from the Certificate of Analysis are stored on the RFID tag of the Smart Chemical.

Just a simple touch transfers all data in seconds

All information needed for method execution, result calculation and documentation as product name, article number, lot/batch no, concentration/assay, shelf life/expiry date are seamlessly transferred to the instrument. For standards additional data as molecular weight, supplier, uncertainty and compliance according to Pharmacopeias and ISO Guide 34 are also transmitted.

Previously opened chemicals are also recognized, the initial opening date is stored on the RFID tag and is shown on the touchscreen. Expired chemicals are automatically locked from use.

Benefits using SmartChemicals

- **Secure data transfer** – ensures complete and correct reagent & standard data in the titration software
- **Ease of use** – intuitive operation and convenient data transfer in one touch
- **Extended quality management** – titer determination, shelf life, compliance data, initial opening date
- **Improved efficiency** – fast data transfer and timesaving with no manual writing and no four-eyes principle necessary

Elevate your fiber performance with Supelco[®] nitinol-core SPME fibers

Supelco[®] SPME fibers with Carboxen[®]/ Polydimethylsiloxane (CAR/PDMS) and Polydimethylsiloxane/Divinylbenzene (PDMS/DVB) coatings are now available on a nitinol core (NIT) in a stainless steel assembly for improved fiber performance. Selectivity of the CAR/PDMS and PDMS/ DVB SPME phases has been maintained for seamless transition of methods from fused-silica core (FS) fibers to the improved NIT technology. NIT fibers offer the following benefits:

- Enhanced reproducibility
- Greater fiber durability
- Unchanged selectivity for method consistency
- Core inertness to ensure analyte stability

Improved Lot-to-Lot and Fiber-to-Fiber Reproducibility

Our nitinol-core SPME fibers provide improved lot-to-lot and fiber-to-fiber reproducibility. This enhanced reproducibility stems from the more stringent coating specifications which significantly reduces fiber variation providing enhanced precision of your chromatographic results.

Greater Fiber Durability

NIT fibers exhibit less to no fiber breakage allowing for extended fiber lifetime. NIT fibers were flexed to 180° without breaking or permanently kinking regardless of coating type.

It's time to say GOOD BYE to Distillation...

Limitation of Distillation

- ⊖ No monitoring mechanisms
- ⊖ High operating cost
- ⊖ Low resistivity
- ⊖ High waste water flow
- ⊖ Does not remove pyrogens
- ⊖ Scaling, high maintenance
- ⊖ Less flow rate
- ⊖ Organic carryover
- ⊖ Water storage is a concern

Distillation Unit

Distillation is the obsolete way of water purification. It does not meet the consistent optimum water **quality**, increase water **wastage** & consume more **Electricity**

In process Testing

A complete solution for bioburden analysis

Merck's membrane filtration and culture media solutions for bioburden testing won't keep you waiting for the accurate results you need to ensure product safety. Merck's membrane filtration technique complies with international standards such as Standard Methods for Examination of Water and Waste Water, US EPA, and EU testing procedures for drinking water. It's simple: the test sample is filtered through a microporous membrane, allowing the retention of any microbial contamination on top of the membrane. Rinsing removes residues that might inhibit the growth of microorganisms. Once the sample is filtered, nutrient medium is added to promote growth of microorganisms for recovery.

Build FOR Better Testing

EZ-Fit Filtration Unit : Convenience without compromise

Your laboratory space is precious - almost as precious as the quality and reliability of your bioburden testing. That's why Merck new EZ- Fit™ Filtration Units for microbial enumeration are stackable. We 've given you a wider selection of membranes and the flexibility to use it with solid or liquid media so you can tailor the EZ- Fit™ Filtration Units to you bioburden applications. The new drain design provides a perfect contact with agar when transferring the membrane, and the base protective rim ensures that you can trust you results. Every time. And the new EZ- Fit™. Filtration Units are a time saver, too -save filtration time on difficult to filter samples thanks to our new pink base design and set up time with our packaging solutions.

Certified Reference Microorganisms

In microbiological testing; the one factor that is repeatedly overlooked is careful sourcing of biological products such as the quality control strains. Incorrect quality control materials may indicate that test results are acceptable when, in fact, there is a problem with the samples being tested. Alternatively, control results may indicate that a test is not performing correctly, instigating unnecessary investigations and repeat testing.

sterile irradi. isopropyl Myristate

Ordering number: 1.46628.0006

Isopropyl Myristate (IPM) is a fatty acid ester which is used as solvent in water-in-oil emulsion, oils and fatty based ointments. The use of IPM is recommended in the Sterility Test chapter of the European, Japanese and United States Pharmacopoeia (EP, 2.6.13, JP, 4.06 and USP, 71) as diluent for oils and oily solutions, as well as for ointments and creams. Indeed, its solvent properties improve the filterability of these samples.

Product Information

Our irradiated IPM comes in a 500 mL glass bottle with a filling volume of 360 mL, closed with a septum and red flip cap. One box contains 6 bottles. The product is sterilized by gamma-irradiation within a dose range of 25 to 40 kGy.

Appearance

The appearance of the fluid is clear and colorless. The clear glass bottle turns into an amber color due to the gamma-irradiation waves.

Application

According to EP, JP and USP, oils and oily solutions of high viscosity may be diluted if necessary with isopropyl myristate to facilitate membrane filtration. The oil should penetrate the membrane by its own weight followed by filtering by gradual application of pressure or suction. The membrane may be washed 3 times with 100 mL Fluid D afterwards. At least one or one half of the filter is incubated in Tryptic Soy Broth (e.g. article number 146317) and a second or the other half of the filter in Fluid Thioglycollate Medium (e.g. article number 146406) for not less than 14 days.

According to EP, JP and USP, ointments and creams can also be diluted up to 1% in IPM prior to filtration.

Note: In case of direct inoculation of microorganisms into IPM, addition of 9% NaCl Peptone Buffer ensures recovery rate above 70%

Storage and Shelf Life

The product can be used for sterility testing until the expiry date if stored upright, protected from light and properly closed at +2 °C to +25 °C.

Disposal

Please mind the respective regulations for the disposal of chemicals. Waste material must be disposed of in accordance with the national and local regulations.

One Step Ahead, in F&B hygiene monitoring with the MVP ICON[®] system

MVP ICON[®] –
one system helping you work smarter.

MVP ICON[®] **The most comprehensive hygiene monitoring system for the Food & Beverage industries**

The MVP ICON[®] is the only system to provide true HACCP management capabilities for additional HACCP parameters beyond just ATP.

Available measurements include:

- ATP (Adenosine Triphosphate)
- Concentration (PPM) of prepared sanitizers
- Conductivity (μ S) of water samples
- pH of prepared media and product samples
- Temperature in production processes and samples

Accuracy

Consistent performance at every step

MVP ICON[®] sampling devices are designed to compensate for variations in swabbing technique, so no matter how many technicians we have or the frequency of staff turnover, we can be assured of accurate, consistent readings.

- MVP ICON[®] Dashboard Software
- Presentation-ready HACCP reports
- Automatically updated program metrics
- Onsite, anytime instrument calibration and verifications
- No risk of sample/ATP loss

intelligent design

Designed to your needs

The MVP ICON® instrument is ergonomically designed to be lightweight, and it utilizes a color touchscreen display to make it easy and efficient. And test results in both the MVP ICON® and MVP ICON® Dashboard software are intuitively color-coded to help ensure user comprehension and interoperability.

Validate Cleaning and Sanitation

Simplified result interpretation via Zones scale

ATP readings are reported in a proprietary Zones of Cleanliness™ ("Zones") scale adapted from Relative Light Units (RLUs). Like the Richter magnitude scale, the Zones scale takes a practical approach to reporting results, which improves user comprehension and allows operators to focus more on swabbing and testing during cleaning. Results fall into clean, caution, and fail areas so corrective action can be easily determined and immediately implemented.

Performance is not affected by sanitizer interference

Proprietary reagents prevent chemical interference, allowing you to conduct ATP testing before or after sanitizing for utmost flexibility.

Ready for immediate use

Storable at ambient temperature making them ready for immediate use with no waiting time. And sampling devices are room temperature stable for 12 months, which saves you valuable refrigeration space and recurring electricity costs.

Risk Reduction

We minimize risk to make your work more secure

ATP testing is only one facet of a hygiene monitoring program. But with the MVP ICON® we can accurately measure prepared chemical concentrations using the optional MVP ICON® Conductivity & Concentration Probe. This helps you avoid unnecessary over-use of expensive chemicals while ensuring your sanitizers work to effectively clean product contact surfaces.
